

<?> Developer Test

Patryk Bojar

The project is created in Java Spring, Maven and GitHub API REST and GitHub Token authentication.

To test the solution you need to open the **GitHubAplicacion.java** class located in the **com.patryk.gitdemo.application** package inside **src/main/java**.

- String orgName = "collectiveidea"; is the name of the organization you want to check. You can change the organization if you want.
1. Run the application to see the results.
 - a. Expected output:

```
Number of repositories in organization collectiveidea: 30  
Size of the biggest repository in organization collectiveidea: 1466368 bytes  
Number of organizations on Github: 30
```

You can also see some of the JUnit tests. They're located in **GitHubAplicClientTest.java** class in **com.patryk.gitdemo.client** package inside **src/test/java**.

1. To run the tests, execute the code as JUnit Test (Eclipse).
 - a. Expected output:
